

Network Traffic Analysis Report

Security Monitoring & Analysis
Generated: December 12, 2025 at 13:03:35

Total Packets Captured:	168,691
Total Data Transferred:	169.04 MB
Capture Start:	2025-12-09 18:12:28
Capture End:	2025-12-11 14:22:38
Security Alerts:	3

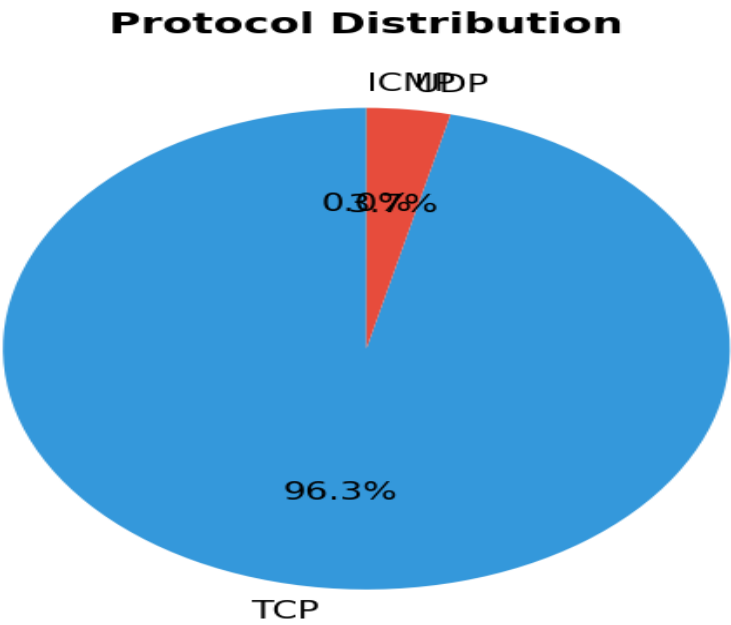

Executive Summary

This report presents a comprehensive analysis of network traffic captured during the monitoring period from 2025-12-09 18:12:28 to 2025-12-11 14:22:38. A total of 168,691 packets were captured, representing 169.04 MB of data transfer.

The dominant protocol observed was **TCP** (162,417 packets, 96.3% of total traffic). The most active source IP address was **192.168.0.17** with 63,501 packets transmitted.

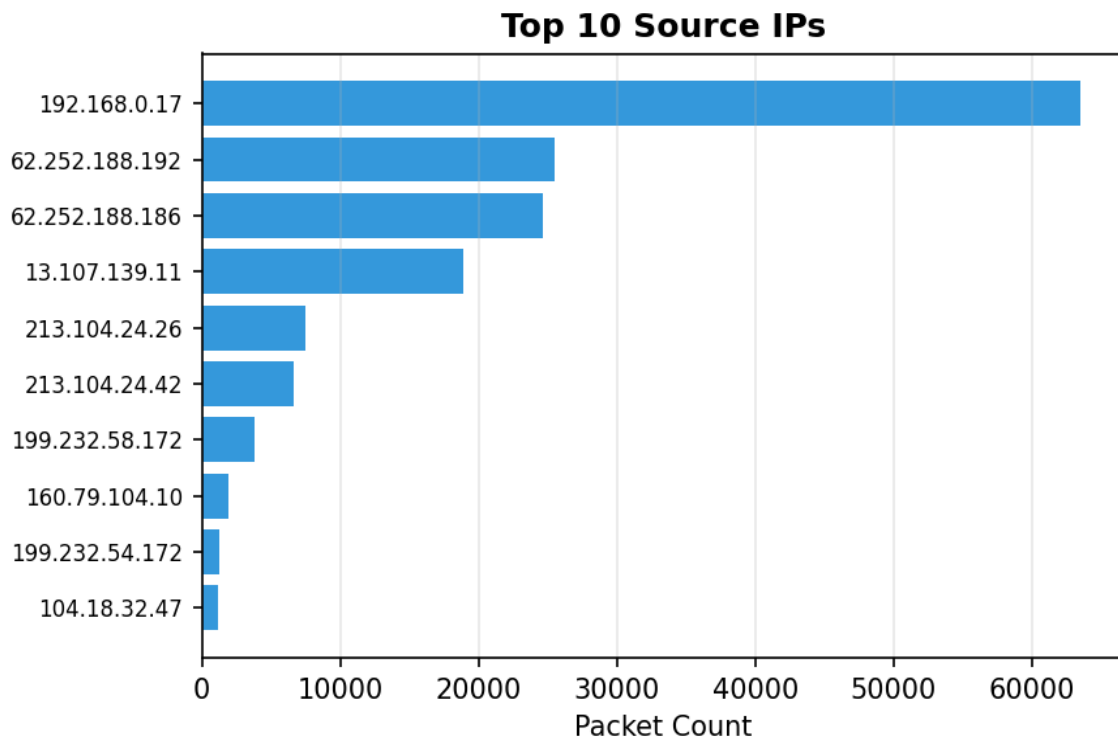

Security Concern: 3 security alerts were triggered during this capture period. Immediate review recommended.

Protocol Distribution Analysis

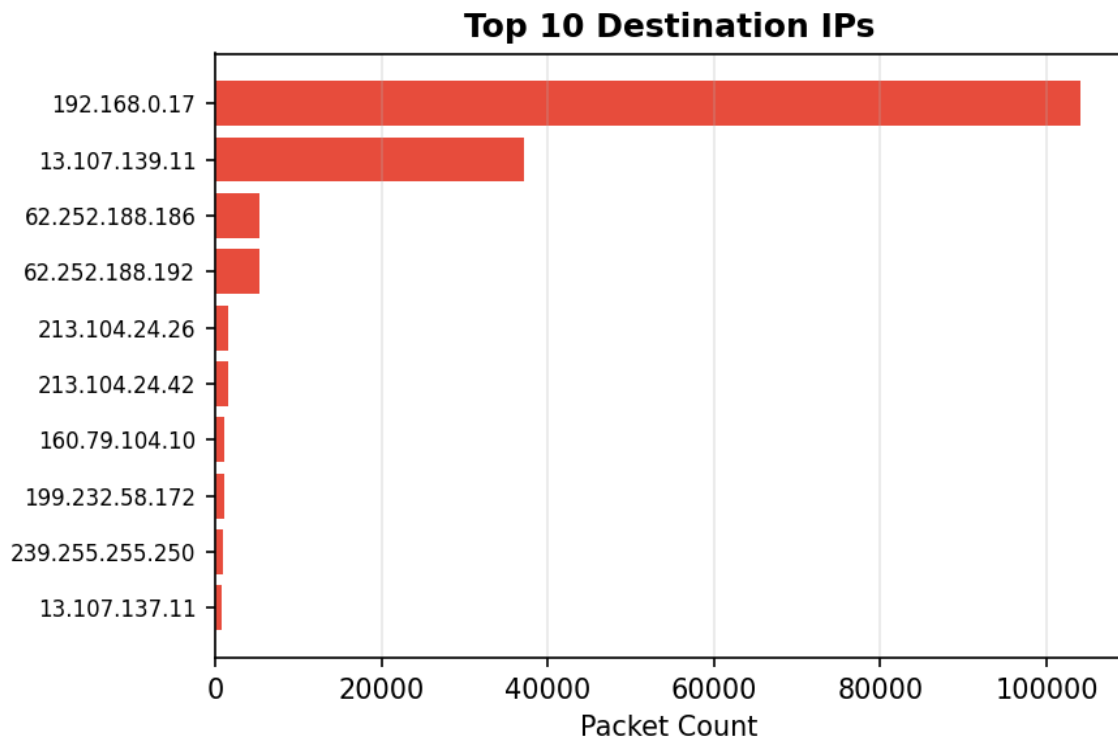

Protocol	Packet Count	Percentage
TCP	162,417	96.28%
UDP	6,266	3.71%
ICMP	8	0.00%

Top Source IP Addresses

Rank	IP Address	Packet Count	% of Total
1	192.168.0.17	63,501	37.64%
2	62.252.188.192	25,500	15.12%
3	62.252.188.186	24,647	14.61%
4	13.107.139.11	18,873	11.19%
5	213.104.24.26	7,508	4.45%
6	213.104.24.42	6,685	3.96%
7	199.232.58.172	3,838	2.28%
8	160.79.104.10	1,946	1.15%
9	199.232.54.172	1,237	0.73%
10	104.18.32.47	1,181	0.70%

Top Destination IP Addresses

Rank	IP Address	Packet Count	% of Total
1	192.168.0.17	104,061	61.69%
2	13.107.139.11	37,156	22.03%
3	62.252.188.186	5,398	3.20%
4	62.252.188.192	5,358	3.18%
5	213.104.24.26	1,608	0.95%
6	213.104.24.42	1,511	0.90%
7	160.79.104.10	1,100	0.65%
8	199.232.58.172	1,029	0.61%
9	239.255.255.250	999	0.59%
10	13.107.137.11	712	0.42%

Security Alerts & Anomalies

WARNING: 3 security alert(s) were detected during the monitoring period. These alerts indicate potential security threats or anomalous network behavior that require immediate attention.

- 2025-12-10 14:24:55 - PORT SCAN: 194.168.4.123 scanning 16 ports
- 2025-12-10 14:25:36 - PORT SCAN: 194.168.4.123 scanning 23 ports
- 2025-12-10 14:26:07 - PORT SCAN: 194.168.4.123 scanning 29 ports

Security Recommendations

1. **Review Security Alerts:** Investigate all triggered alerts to determine if they represent genuine threats or false positives.
2. **Monitor Top Talkers:** Verify that high-volume source IPs are legitimate and authorized network users.
3. **Protocol Analysis:** Ensure protocol distribution aligns with expected network usage patterns.
4. **Unusual Ports:** Investigate connections to non-standard ports that may indicate malicious activity.
5. **Regular Monitoring:** Implement continuous network monitoring to detect threats in real-time.
6. **Update Firewall Rules:** Consider blocking IPs that triggered multiple security alerts.
7. **Incident Response:** Document any confirmed security incidents and update response procedures.
8. **Baseline Establishment:** Use this report to establish normal network behavior patterns for future comparison.
